

Comparison of geochemical datasets for “Confirmation of Mg/Ca ratios as palaeothermometers in Atlantic limpet shells”

Overview

These supplementary files include the linescan information for Mg/Ca and $\delta^{18}\text{O}$ records of all analysed *Patella vulgata* and *Nacella* sp. shells, which were analysed to reassess the use of Magnesium to Calcium (Mg/Ca) ratios as palaeothermometers in Atlantic limpet shells. These supplementary files are organised by species and specimen identifiers.
